

The Motorola ML910

Tougher than the toughest — reliable data available when and where you need it

When your mobile workers need an anywhere anytime connection to business information and applications they can count on, the ML910 delivers. Building on the highly successful Motorola ML900, the ML910 offers unmatched power, performance, durability and security for dependable mobile data access, earning the title of Motorola's most advanced rugged mobile laptop. Running Microsoft Windows XP, from top to bottom and handle to hinge, the ML910 is designed to deliver true inside and outside mobility for virtually any application in the toughest environments. The ML910 keeps your on-the-move workers connected and productive with seamless connectivity to critical business data throughout the workday — from maintenance personnel on the assembly line and managers on the warehouse floor to public safety personnel and delivery drivers out in the field.

ENTERPRISE BROCHURE

THE MOTOROLA ML910

Tougher than the toughest — reliable data available when and where you need it

Designed to deliver reliable performance in any environment.

The ML910 is built and tested to military standard MIL-STD 810F — the toughest of tough. Your workers can count on information whenever they need it, regardless of where they may be.

Maximum processing power

The ML910 delivers the processing power needed to support the most demanding enterprise applications, with best-in-class mobile graphics. The Intel® Core Duo 1.66 GHz processor with 667 MHz front-side bus enables enterprises to easily extend mobile access to nearly any application — from simple to complex. The ML910 even offers integrated digital video support — onboard video functionality combines with a dedicated ATI Mobility Radeon® X1400 graphics processor with 128 MB dedicated video memory to enable the capture and display of real-time video.

Maximum application flexibility

With the ML910, your users enjoy the features and functionality needed to easily view and navigate applications. The 13.3 in. widescreen display — a first for rugged laptops — provides the space users need to easily view multiple applications. A brighter screen with greater contrast and higher resolution than the typical rugged laptop enables easy viewing — even in direct sunlight. And the unique touchscreen enables easy interaction in any environment — even with gloved hands.

Fully rugged

Whether your workers are inside the enterprise walls in a controlled environment or a dusty warehouse, or are outside in the harshest conditions, the ML910 delivers reliable performance. The ML910 meets and exceeds MIL-STD 810F standards, and offers a fully sealed keyboard and a patented thermal management solution, ensuring its ability to endure blazing heat, freezing cold, constant shock and vibration as well as protection against water, dust, sand and humidity. In addition, the intelligent ML910 offers updated diagnostic software that monitors internal conditions to prevent outages due to extreme heat and cold. A patented sealed antenna for the GPS, Bluetooth and WLAN radios eliminates a frequent area of vulnerability. And a second battery slot ensures extended operational time when battery power is the only option.

True inside outside wireless connectivity

When it comes to wireless connectivity, the ML910 shines. The high performance design is optimized for wireless usage first, enabling coverage even

in low and remote spots. Simultaneous support for four different radio options — WWAN, WLAN, GPS and WPAN (Bluetooth) — keeps workers connected as they move inside and outside the enterprise throughout the workday. WWAN connectivity keeps workers connected outside the four walls; WLAN connectivity provides cost-effective data communications inside the four walls; GPS enables you to easily track employees as well as enable location-based services, such as turn-by-turn directions; and WPAN provides convenient wireless printing and more.

Maximum security

While mobility keeps workers more productive and efficient, it also puts your data at increased risk — laptops are susceptible to theft, and are often more vulnerable when connected to a wireless network. To provide peace of mind for your ML910 mobility solution, Motorola has added the most flexible and comprehensive security options available to keep your enterprise information safe from illegal intrusion, including Trusted Platform Module (TPM) v1.2 security, 500+ DPI Fingerprint Scan Security, and an optional smart card reader.

Maximum value

The rugged design of the ML910 delivers superior enterprise value. Anywhere-everywhere reliable performance substantially reduces maintenance and device replacement costs as well as employee downtime, providing a low total cost of ownership and protecting your operational efficiency.

The Motorola advantage

With over 75 years experience in wireless communications, Motorola offers the product innovation, expertise and support you need to maximize the success of your enterprise mobility solution. When you choose Motorola, you choose true end-to-end mobility solutions, with deployment services to get you up and running quickly; and support services to maximize uptime.
